ABOUT ME

B.Tech CSE student specializing in end-to-end machine learning pipelines, custom statistical modeling, and data architecture. Combines a strong mathematical foundation with disciplined daily algorithmic problem-solving.

EDUCATION

IMS Engineering College | 2025-2029

Bachelor of Technology in Computer Science & Engineering

- Core Coursework: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Machine Learning.
- Extracurriculars: Active participant in college literary, debating, and anchoring events.

WORK EXPERIENCE

Flyrank AI | July 2026 - Present

Machine Learning Intern

Selected for a research-driven, self-paced internship focused on building predictive models and implementing practical, real-world AI architectures.

PROJECTS

Premier League Match Predictor | Python, XGBoost, SciPy

- Built a 3-class classification hybrid model (XGBoost) to predict match outcomes using 6 seasons of historical data.
- Implemented a custom Dixon-Coles goal model from scratch utilizing Poisson distributions and maximum likelihood estimation.
- Engineered 70+ leakage-free pre-match features, optimizing performance through systematic algorithmic iteration.

StudyScore: ML Web App & API | Python, Flask, Render

- Developed and deployed an end-to-end Flask ML web application to predict exam performance and reverse-engineer target goals.
- Engineered custom interaction terms and binary flags to successfully capture non-linear variables within a Linear Regression architecture.
- Calculated 95% confidence intervals from scratch using full leverage mathematical formulas for a custom statistical reporting API.

TECHNICAL SKILLS

- Languages & Core: Python, C++, Data Structures & Algorithms (DSA)
- Machine Learning: Scikit-Learn, Pandas, NumPy, SciPy, Statistical Modeling, Feature Engineering
- Backend & Cloud: Flask, Render, Git/GitHub
